PFMI: Q.12.1.1 AGC: 66v.
412 G12Q006

OTHER:
413 G12Q007 Please briefly describe your settlement process, including how do your settlement procedures vary from the model chosen above?
PFMI: Q.12.1.3 AGC: 48a
No difference from standard models. Note: Model 1 for off-exchange (OTC) settlements, Model 3 for CCP-cleared on-exchange cash market settlements.
In case of OTC settlements CSD participants' instructions require matching and settlement occurs on a gross basis, on a trade by trade basis. The delivery of the securities
requires the successful transfer of funds from buyer to the seller which triggers the immediate and unrevocable transfer of the securities. (DVP principle)
In case of the CCP-cleared on-exchange trades the netted delivery and receipt settlement instructions (per ISIN) are sent by KELER CCP to KELER CSD in an already matched status. The delivery instructions should be settled first (from the participants accounts to KELER CCP) and the daily net countervalue of all trades will be debited in one sum from the clients' accounts to credit the CCP. Once the netted amounts are successfully debited KELER CCP initiates the net credit funds transfer in favour of the participants. (All security receipts per ISIN and all amounts due.)

KELER prepared its formalized Business Continuity Plan (BCP) with consultancy and quality assurance from KPMG Hungary Ltd. With the preparation of the BCP KELER
had the following goals:
- To ensure the continuity of business operations in case of undesirable events.
- In case of any disruption in normal business operations, to resume operations within the shortest possible time at the lowest possible cost. The cornerstone of our BCP is the in-depth analysis of the potential risk factors ant their possible effects on the operation of the company, based on which the critical business processes and
their supporting resources were defined. In order to manage extensive crisis situations, a back-up site was set up in 2004, which serves as an alternative site for operations and an alternative workplace for staff if the operations can not be continued at the prior site. Data are replicated real-time in the back-up site. Business
Continuity Plan (BCP) ensures the expected business continuity in case of incidents, partial stops or crisis. In the event that KELER is unable to provide the service supported by alternative means in accordance with its BCP or in case the Clients' co-operation is required KELER notifies Clients without delay. KELER communicates
updates primarily via e-mail to both network management and operations contacts. The latest BCP-Disaster Recovery Plan (DRP) testing of KELER's back-up site
workstations and most of its business processes was carried out by KELER on 25 October 2016. The real life disaster recovery test was carried out successfully, clients were using KELER's services without any problems and the test did not substantially influence day-to-day operations. BCP and DRP regulations, and recovery
plans are regularly (1 year period) reviewed, tested and updated, as well as audited by external parties (supervisory institutions and auditing organisations).
